To use the BEKOMAT Product Selector Chart, first locate either your compressor horsepower (for multiple compressors use the total system horsepower) or the net flow rate of your compressed air system. Follow the row to the right and locate the column with the appropriate installation point for your particular application (e.g. wet receiver tank) and select the model indicated. For other applications not addressed in this table, please contact CAG Purification.

For extremely corrosive applications where excessive amounts of rust, scale or particles are present, please contact CAG Purification for special installation instructions.

Capacity tests and our long-term experience have enabled us to make locational adjustments to our capacity figures by taking global climate data into account. Therefore, if you feel that the location of the application may have an impact on the model selection (e.g. tropical climate), please contact CAG Purification.
