IMPORTANT:

The application, your regional location, climate zone, oil type and additives, compressor type, condensate volume changes through the day and season, tendency of emulsification, and many other factors may have a significant impact on the sizing of an oil/water separator and the life time of the oil/water separator cartridge. The sizing correction factors and life time expectancy of the cartridge are estimated values only.

Please consult CAG Purification for details and sizing assistance.

IMPORTANT: If you do not know the condensate type (emulsion or mixture) then please select from the QWIK-PURE range of separators.

To use the OWAMAT Product Selector Chart, first locate either your compressor horsepower (for multiple compressors use the total system horsepower) or the net flow rate of your compressed air system. Follow the row to the right and locate the column with the appropriate compressor type and lubricant for your particular application (e.g. piston compressor with synthetic lubricant) and select the model(s) indicated. For other applications not addressed in this table, please contact CAG Purification.

The correction factors on this page provide an estimation of the performance that can be achieved with the model sizes shown. For precise sizing of your application, please contact CAG Purification Inc.
